

SIMPLE WEIGH™

The Fastway® SIMPLE WEIGH™ Tongue Weight Scale helps you know your tongue weight, so you can balance your load, providing a safer, more confident tow.

Trailer tongue weight should be 10-15% of the total trailer weight for most bumper-pull trailers. If the tongue weight is too low, the trailer will be prone to sway. If tongue weight is too high, the tow vehicle's rear axle could be overloaded and steering could be light and cause drifting.

Designed to fit every coupler size, the SIMPLE WEIGH is the faster and easier way to measure your tongue weight.

Enjoy safer towing with better steering, improved braking control, and reduced trailer sway with a properly balanced load.

Mechanical spring scale provides consistent measurements with a lifetime of dependable use.

Up to a 2100 lbs. weight capacity allows you to measure the tongue weight of your heaviest trailers.

Easy to use with no assembly required.

Always chock the trailer when using the SIMPLE WEIGH tongue scale.

Do not retract the jack more than 1" above the ground, and never load, unload or move cargo when the trailer tongue is being supported by the SIMPLE WEIGH.
