

AN IMPORTANT MAINTENANCE ISSUE

## PROFESSIONAL TANK CLEANINGS

Some RVers get their holding tanks professionally cleaned because they're curious. But it's also something to have done to get your tanks finally clean and working properly.

- Our cleaning process does a great job of removing the stuff fouling up sensors while getting them clean. Sometimes, older sensors, those that have shorted out, or faulty electronics means there may be no alternative other than replacement. Annual cleanings by a professional can almost always get your tank sensors working – and keep them reading accurately!
- As you might guess, holding tanks can get pretty smelly. Even gray tanks can become something to turn your nose up at. A professional tank cleaning will scrub out all of the buildup and residue in your RV's holding tanks, leaving them as clean as they were when they left the factory.
- Over time, waste and other residue is guaranteed to build up in every RV holding tank. The mere geometry and design of a holding tank means not all waste can be eliminated every time you dump. A professional cleaning will clear out hard-to-get waste and scrub the interior surfaces of your tanks clean.
- A clean tank is an emptier tank that can accept more water and waste. If you have excess buildup, the tank's capacity is diminished, as well as it's performance. We will talk to you about your RVing habits and usage and give your recommendations to make caring for your tanks easier, safer, and less of a hassle!

Our cleaning process is done on-site, at your RV. We use the power of high-pressure water (1500 PSI) to scrub your tanks clean – from the inside. Our process is environmentally safe, fast (usually one to two hours if there aren't any major problems), and makes no mess at your site. Your neighbor won't be bothered by loud sounds or intrusive equipment. And you're always welcome to watch and ask questions!

THAT'S NOT \*MY\* RV SMELLING LIKE THAT!

## WELCOME TO OUR SEMINAR

Of course your RV doesn't smell! That's someone else's, right? Well, you may be correct, but we're guessing that your holding tanks and waste-handling system are probably the most unpleasant part of your RVing experience.

We will have a question-and-answer session at the end of the seminar. Please hold your questions until then, as we may cover the answer in a different part of the presentation.

At the end of the session, we will hold a drawing for a free gift. We would appreciate it if you would complete the seminar comment card included with this booklet near the end of the session. We will be around to pick them up and then draw the name of one lucky winner.

WHO IS KLEEN TANK?

## THE NATIONAL LEADER IN TANK CLEANING

- A nationwide network of independent, authorized dealers
- A proven process that gets holding tanks "factory kleen"
- Thousands of RV tanks cleaned every year
- Every make, model, type and year is able to be serviced
- We clean holding tanks: black, gray, water heater & freshwater
- Service takes about 1-1/2 to 2 hours, depending on the RV and if there are any problems
- We clear clogs and mounds, making tanks drain better
- High-pressure water cleans your tanks from the inside
- Our service is offered at your rally
- We're always glad to answer questions
- If you have our service, watch but don't help, please
- We're taking appointments; see us at the end of the seminar
- Call 844-KLEENME or visit KleenTank.com to schedule an appointment, ask a question, or get more information
