

# 68th Airstream Club International Rally

## August 23-28, 2025 | York, PA

### 30 Amp Electric Power Use Procedure

All rally participants should have an **additional 25' power extension cord** and any **power adapters (dog bones)** you may need. Also, a **surge protection device** is recommended.

The York Fairgrounds will provide temporary power distribution, electric power panels and 30-amp power cords with outlets. The 30-amp outlets will be located at or near each site.

Due to the temporary electrical system, we ask you to **limit your power requirements**. Any rigs with two air conditioners, **you may use only one**, *even if you have soft starts on them*.

Under ideal conditions you should not use more than 26 amps continuously on a 30-amp circuit or receptacle. If the temperatures go above 80 degrees, you will need to lower your power requirements to below 23 amps continuously.

Thank you for working with our Electrical Volunteers. Hopefully your efforts will reduce nuisance circuit breaker tripping.

Enjoy the rally!
