

**What are the specifications for the alignment of my GKN (Henschen axles)?**

The suggested specs for alignment of the axle:

Toe would be 0 to 1/8 inch positive. The tech's at our Factory Service Center try to keep this within 1/16 when we do the alignment.

Camber would be 0 to 1 1/2 degrees positive. The tech's at our Factory Service Center try to keep this within 1/2 degree when we do the alignment.

**What Service Centers will align my Henschen Dura –Torque axle?**

**ARIZONA**

Oasis RV Center  
2111E Benton Hwy.
