

Something New—Replacement LED bulbs for incandescent and fluorescent lights.

Do you want to brighten up the interior of your Airstream and save power too? Then you will want to give these Extreme LED replacement bulbs a try; the LEDs use about 1/10th the power of an incandescent bulb and don't produce the heat.

Blue Beret/May 2009 47

The incandescent LED replacement pad is easy to install, just remove the bulb then remove adhesive cover on back of light pad stick to light fixture and plug into light socket. The fluorescent replacement bulb strip also has an adhesive backer and wires into the current light fixture wiring. You can go to www.airstream.com and purchase these lights at our online store.
