

Caring for your propane bottle

If the cylinder looks like the example above please have it properly disposed of.

If the cylinder looks like the example above please have it properly disposed of.

Rust

If rust is noticed on the cylinder, a wire brush can be used to remove the rust followed by painting (you can use something similar to NAPA's Rust Treatment) over the spot where rust was removed.

The most common place rust is found is on the bottom of the cylinder and around the foot ring of the cylinder so it's important to keep these areas clean and painted.

Ensure that cylinders are secured prior to transporting them

Propane bottles should be secured when being transported so they do not roll around and damage the valve, dent the bottle or damage the protective rings.

The horizontal bottles were first used in 1984 on the Argosy and later Airstream "Squarestream" type trailers and on Limited trailers until the 1998 model year.
