

# Disc Brake Pads

Question: I own a 2008 27 ft. FB Classic Airstream which I purchased new in Feb. 2008. The brakes are a hydraulic electric system with metallic disc pads. From the beginning, the brakes would squeal every time they were applied. I had them checked at the RV business where I purchased the trailer, as well as a reputable brake service business. Both places said they were good.

Now after 9 years, I would like to have them replaced with regular disc pads to eliminate the noise. The brake serviceman said they would have to know the size in order to have them available when I take the trailer down for replacement of the brake pads. Can you tell me the size of the pads? I have been unable to determine this from my owner manual and paperwork. Help!

**Response:** I am afraid I don't have the detail specs (size) for the Dexter disc brake pads. I do have the replacement pad info to be able to order them online or if you are going to the Airstream Factory, they have them available.

The Airstream Part number for a set of four pads is PN:684008. I also have included the Dexter online (864- 263-3170) parts ordering contact number that may be able to provide more specific information.
