

Microfiber Cloths

Microfiber cloth has been used as small eyeglass cleaning cloths and in the clothing industry for a number of years. Since first introduced Microfiber has been redesigned into a terry-cloth type material that is excellent for cleaning and general utility purposes. It is a polyester/polyamide fabric which is 100 times finer than a human hair, containing 90,000 Microfibers per square inch. This allows it to hold moisture and remove dirt with a much reduced chance for surface scratching. Initially the cloths were on the pricey side, but with increased production and suppliers, these dandy clean-up clothes are now quite affordable.

Marie Syrett, WBCCI # 9313, found rarely needs scrubbing if we squeegee also serve well getting “road kill” bugs a bundle of Microfiber cloths (see at- and then finish with the Microfiber cloth off the front of the rig. tached photo) at *Sam’s Club* for about each time.
