

water heater and furnace doors, Atwood

Well fall is fast approaching and everyone seems busy either winding down from a busy summer or getting ready to hit the road traveling to warmer climates for the winter. We will soon be switching from Customer Service calls pertaining to refrigerators and Air Conditioners to Furnaces. Welcome to Fall!!

I wanted to take a moment and share with you some things our Service Center and Store have been working on based on feedback at recent rallies and customer letters.

The first items would be Atwood water heater and furnace doors; we have been selling stainless steel replacement door and furnace doors for the last several years. At the recent Alumapalooza Rally customers indicated they would prefer the door edges wrap around the sides of water heater and furnace. We have made those changes and there is now an approx. 3/16" flange that wraps around the furnace and water heater frame. You would use the same hardware and exhaust vents from your current doors.

We also have developed a Stainless steel Range exhaust vent in lieu of the current plastic version.
