

Rubber Screw Caps - Making sure you don't get the Point!

If you have every cleaned the inside window frames on your trailer and caught your hand on one of the screw points, these screw covers may be for you. The screw caps are used to cover screw points in the window frame between the inside screen & the window glass. Airstream uses screws to attach the window screen to the window frame resulting in screw points protruding between window frame and outside glass. This can lead to a few nicks and scratches when cleaning the inside of the window frame. Airstream currently uses these caps on all new products, but if you have an earlier model without the screw covers they can be obtained through your Airstream dealer.

The Airstream part number is 382116- 03.
